SMITH PAREKH

AI Engineer | AI Automation

Mumbai, India | +91 86899 60348 | smithparekh107@gmail.com | linkedin.com/in/smith-parekh | github.com/smithparekh

Objective

AI Engineer with 4+ years building production AI and automation systems — agentic classification pipelines, fraud-detection ML, and workflow automation — seeking AI Engineer / AI Automation roles.

Skills

- **AI & Agents:** LangChain, LangGraph, OpenAI API (GPT-4o-mini), Groq API, RAG, Qdrant, FAISS, Autonomous Agents
- **Automation & Workflow:** n8n, Zapier, MCP (Model Context Protocol), AWS Lambda, REST APIs
- **Languages & Data:** Python (Pandas, NumPy), SQL, DAX
- **Data Platforms:** Snowflake, ClickHouse, PostgreSQL, dbt, Power BI, Metabase
- **Cloud & Tools:** AWS (Lambda, S3), AWS Fraud Detector, Git, Jira

Experience

Data Analyst (AI & Automation) — ParityCube Dec 2024 – Present

- Built a self-learning deal-category classification pipeline processing ~1,000 deals/day: RAG-based semantic search (Qdrant, OpenAI embeddings, cosine similarity) as the primary classifier, with an autonomous AWS Lambda agent (GPT-4o-mini) as fallback — governed by a strict system prompt constraining output to a fixed internal category taxonomy from deal title and URL — writing results back into Qdrant to reduce future fallback calls over time, fully eliminating manual categorization.
- Deployed an AWS Fraud Detector ML model for gift-card fraud with custom HLR mobile-number enrichment features, cutting fraudulent transactions by 80% and manual review by 90%, eliminating police escalations.
- Built finance-team automation workflows using n8n and Zapier, saving ~2 hours/day of manual work; also automated recurring reporting and campaign workflows for the operations team.
- Developed an MCP server enabling non-technical marketing teams to self-serve campaign performance reports (daily to yearly) via plain-English prompts, eliminating ad-hoc SQL requests.
- Automated data collection end-to-end: a Python + Cloudflare Worker pipeline auto-extracts listings for 600–700 of ~1,000 daily deals, and a competitor-monitoring scraper across 6 platforms surfaces 10–15 exclusive stores/coupons per cycle.
- Own 3 executive BI dashboards (Metabase/Power BI on PostgreSQL & ClickHouse) tracking 6.8M+ affiliate transactions, including a cross-platform ClickHouse campaign comparison tool; insights drove a 10–14% platform profit-margin improvement over 3 fiscal years.

Data Analyst — Fin Rise Softech Jun 2022 – Nov 2024

Fintech

- Contributed to database schema and data-model design for a Risk Management System, improving system performance by 15% and strengthening data integrity across all tracking workflows.
- Built and maintained a Power BI risk-monitoring dashboard tracking market data across 200+ client portfolios, improving data accuracy by 25% and reducing risk exposure by 30%.
- Wrote and optimized SQL queries and stored procedures (SQL Server), cutting query execution time by 10% and eliminating production deadlocks.

Projects

- **AI Job Application Copilot** — Streamlit application using the Groq LLaMA-3.3-70B API to score a resume against a job description (match %, missing skills, keyword gaps) and generate tailored resume/cover-letter drafts; includes an autonomous background job scanner covering 9 job boards (Greenhouse, Lever, Ashby, and others) with smart location/keyword matching, automatic 6-hourly scans, and a local application tracker with conversion analytics. (View on

GitHub)

- **Affiliate Revenue Intelligence Platform** — Analytics engineering platform on Snowflake + dbt modeling affiliate click, conversion, campaign, and merchant data into a tested dimensional layer (18 models, 150 dbt tests, 0 failures) with incremental processing and full lineage documentation. (View on GitHub)

Certifications

- Oracle Cloud Infrastructure 2024 — Generative AI Certified Professional, *Oracle* (2024)
- Google Data Analytics Professional Certificate, *Coursera* (2022)
- Advanced SQL, SQL (Intermediate), SQL (Basic), *HackerRank*
- Deep Learning, *Udemy* (2021)

Education

B.E. in Information Technology, Universal College of Engineering 2016 – 2022
